# CHAPTER 1

---

## Installation

---

### 1.1 Installation for developers

It is recommended to install pyac in a python virtual environment.

Check <https://virtualenv.pypa.io/en/latest/installation.html>. In Debian:

```
sudo apt install python-virtualenv
```

Create a virtual environment:

```
mkdir ~/.virtualenvs
virtualenv ~/.virtualenvs/pyacenv
source ~/.virtualenvs/pyacenv/bin/activate
```

Get the sources:

```
git clone https://github.com/juga0/pyac
```

Install it:

```
pip install -e .
```

# CHAPTER 2

---

## Running

---

An updated command line usage description can be obtained with:

```
autocrypt -h
```

At the time of writing the output is:

```
usage: autocrypt [-h] [-version] [-d] [-m PGPHOME] [-l] [-n NEWACCOUNT] [-r NEWPEER] [-a] [-g] [-u] [-p PASSPHRASE] [-c] [-f FROMH] [-t TO] [-s SUBJECT] [-b BODY] [-e PE] [-i INPUT] [-o OUTPUT]
```

### optional arguments:

- h, --help** show this help message and exit
- version** show program's version number and exit
- d, --debug** Set logging level to debug
- m PGPHOME, --pgphome PGPHOME** Path to Autocrypt home, `~/.pyac` by default
- l, --list** List account and peers
- n NEWACCOUNT, --newaccount NEWACCOUNT** Email address for the new account. It will also generate new OpenPGP keys.
- r NEWPEER, --newpeer NEWPEER** Email address for the new peer.
- a, --genac** Generate Autocrypt Email. Use `-f`, `-t`, `-s`, `-b`, or the defaults will be used
- g, --genag** Generate Autocrypt Gossip Email
- u, --genas** Generate Autocrypt Setup Email
- p PASSPHRASE, --passphrase PASSPHRASE** Passphrase to generate an Autocrypt Setup Email
- c, --genasc** Generate Autocrypt Setup Code
- f FROMH, --fromh FROMH** Email sender address and OpenPGP UID

- t TO, --to TO** Email recipient addresses separated by comma
- s SUBJECT, --subject SUBJECT** Subject for the Autocrypt Email
- b BODY, --body BODY** Body for the Autocrypt Email
- e PE, --pe PE** prefer-encrypt for the Autocrypt Email
- i INPUT, --input INPUT** Path to the Email to parse, by default:  
/home/user/\_my/code/mailencrypt-related/pyac/tests/data/example-simple-autocrypt-pyac.eml
- o OUTPUT, --output OUTPUT** Path to store the Autocrypt Email, by default:  
/tmp/output.eml

An useful argument when reporting bugs is -d.

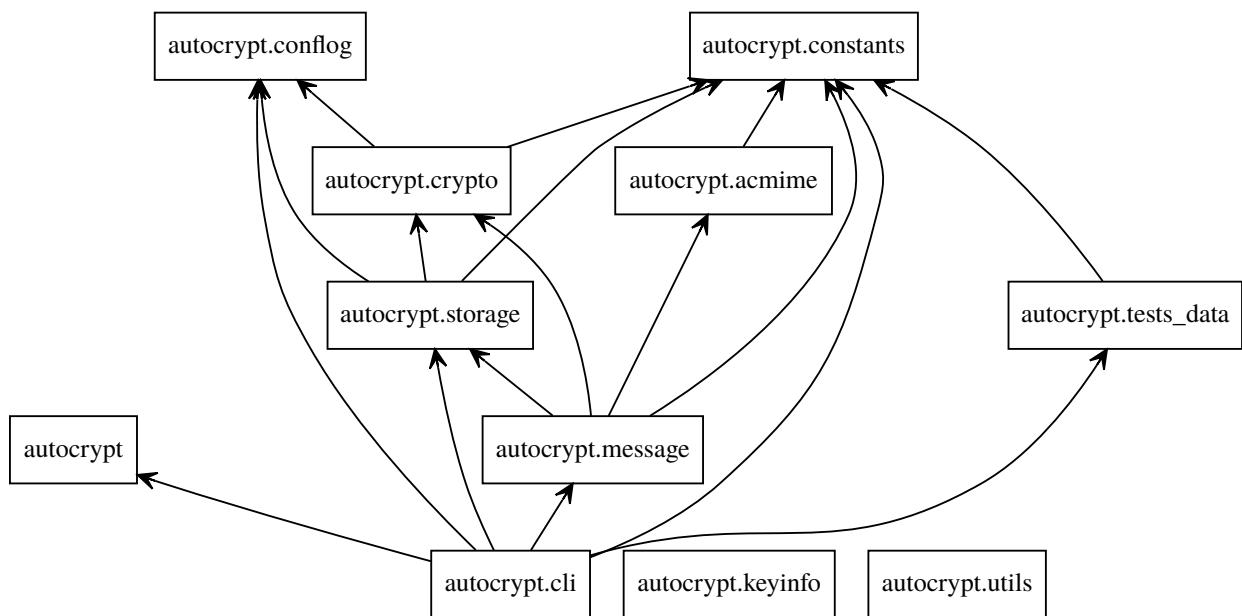

# CHAPTER 3

---

## Diagrams

---

### 3.1 Package diagram

# CHAPTER 4

---

## PyAC Python API Reference

---

### 4.1 autocrypt package

- 4.1.1 `autocrypt.acmime module`
- 4.1.2 `autocrypt.conflog module`
- 4.1.3 `autocrypt.constants module`
- 4.1.4 `autocrypt.test_data module`
- 4.1.5 `autocrypt.crypto module`
- 4.1.6 `autocrypt.message module`

## CHAPTER 5

---

### TODO

---

- [ ] Implement recommendations

# CHAPTER 6

---

## Indices and tables

---

- genindex
- modindex
- search
